EXAMINER

NAWAZ, ASAD M

ART UNIT	PAPER NUMBER
----------	--------------

2155

DATE MAILED: 08/03/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)	
	09/822,685	SUGIARTO ET AL.	
	Examiner	Art Unit	
	Asad M Nawaz	2155	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☒ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-24 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-24 is/are rejected.
- 7) ☒ Claim(s) 6-8 and 22 is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 3-30-2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. ____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- | | |
|-----------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|
| 1) <input checked="" type="checkbox"/> Notice of References Cited (PTO-892) | 4) <input type="checkbox"/> Interview Summary (PTO-413) |
| 2) <input type="checkbox"/> Notice of Draftsperson's Patent Drawing Review (PTO-948) | Paper No(s)/Mail Date. ____. |
| 3) <input type="checkbox"/> Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08) | 5) <input type="checkbox"/> Notice of Informal Patent Application (PTO-152) |
| Paper No(s)/Mail Date ____. | 6) <input type="checkbox"/> Other: ____. |

1. Claims 1-24 are pending.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on March 30, 2001 has been considered by the examiner.

Specification

3. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Objections

4. Claims 6-8 and 22 are objected to because of the following informalities: The use of the terms "most likely high" and "about 8:00 AM" are not definite. Consider use of alternate language (i.e. peak time, off peak time). Appropriate correction is required.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 14-16 are rejected under 35 U.S.C. 102(e) as being anticipated by Hunter (US PG PUB 20030133692).

As to claim 14, Hunter teaches a system for downloading at least one multimedia content file to a plurality of user computers via a communication network, the system comprising: (Abstract, 0013, 0019)

a) a processor coupled to the communication network, the processor being configured to process a plurality of purchase requests from a plurality of user computers from the network, each purchase request comprising a request to download at least one multimedia content file to a user computer at a user-selected time; (0013, 0018, 0019, 0033, 0057)

b) a storage device coupled to the processor, the storage device being configured to store at least one multimedia content file; (0033, 0056)

c) and at least one timer coupled to the processor, wherein the processor is configured to use the timer to download at least one multimedia content file to a user computer at a user-selected time in response to a purchase request from the user computer. . (0046, 0065, 0084)

As to claim 15, Hunter teaches a system of claim 14, wherein at least one multimedia content file comprises a motion picture. (Abstract, 0013)

As to claim 16, Hunter teaches a system of claim 14, wherein at least one multimedia content file comprises a music compilation. (0105)

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 17 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hunter (US PG PUB 20030133692).

As to claim 17, it would have been obvious to one of ordinary skill in the art at the time the invention was made to appreciate at least one multimedia file comprising a game given the size, video, and audio capabilities of multimedia files that have been taught by Hunter.

As to claim 18, it would have been obvious to one of ordinary skill in the art at the time the invention was made to appreciate the size of multimedia files and especially movies to be over 100 megabytes in size as taught by Hunter. Furthermore, Hunter teaches multimedia files being in compressed and uncompressed modes.

Claims 1-13 and 19-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hunter (US PG PUB 20030133692) further in view of Cochran (US Patent 5768581).

Hunter teaches an audio/video distribution system in which a consumer chooses titles with associated times for downloading files utilizing a GUI with simplified controls that provide selections by title, type, category, etc. via a communications network. The files may then be played at any time desired by the consumer, with the files being

stored on the consumer system. The content providers may change pricing of the products at any time to optimize price vs. consumer demand. This includes offering of pricing specials or incentives. Hunter also discloses an increased income base for supporting provider services and the utilization of lower cost, off-peak time for transmission of a significant portion of the movies. Furthermore, Hunter discloses a method for periodically communicating with each customer household to provide information on available movies and when they will be transmitted, along with pricing information. The disclosed invention further contains time-based security codes for downloading the files using peripheral devices such as a clock that are common in CPU devices. However, Hunter does not explicitly indicate a multimedia file being associated with a user-selected time and a user-selected price.

Cochran teaches a method for selecting records from a computer database by repeatedly displaying search terms from multiple list identifiers before either a list identifier or a search term is selected. This method allows the efficient search of large databases. It further saves computer resources especially on-line transmission resources, and makes searching more accurate and user-friendly. "It is a particular object of the invention to enable a user to view different lists of choices, or search terms, that are available in a unique search situation. The lists may be viewed prior to make a selection that would otherwise reduce the database to a subset of records. Even when the database is complex, users can see choices in multiple indexes and make fine discriminations that they might not recognize as possible if they had

otherwise not been able to view the available choices." (col 4, lines 15-25) These choices include names and prices. (col 2, lines 26-29)

As to claim 1, Hunter teaches a system for downloading at least one multimedia content file to a plurality of user computers via a communication network, the system comprising: (Abstract, 0013, 0019)

a) a processor coupled to the communication network, the processor being configured to process a plurality of purchase requests from a plurality of user computers from the network, each purchase request comprising a request to download at least one multimedia content file to a user computer at a user-selected time with a user-selected price; (0013, 0018, 0019, 0033, 0057)

b) a storage device coupled to the processor, the storage device being configured to store at least one multimedia content file; (0033,0056)

c) and at least one timer coupled to the processor, wherein the processor is configured to use the timer to download at least one multimedia content file to a user computer at a user-selected time in response to a purchase request from the user computer. (0046, 0065, 0084)

With respect to the specific limitation "*each* purchase request comprising a request to download ... at a user-selected time with a user-selected price", Hunter does not explicitly indicate a multimedia file being associated with a user-selected time and a user-selected price for each purchase request.

Cochran does teach a searching method in which a consumer can simultaneously select multiple indices such as prices and times. (col 2, 26-29; col 4, 15-25)

With respect to claim 1, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to incorporate the teachings of Cochran into those of Hunter to make the system more efficient search of the file database and to make searching/requesting more accurate and user-friendly. (Cochran Abstract)

Claim 23 is rejected on the same grounds as claim 1 for being a system performing essentially the same task.

As to claim 2, it would have been obvious to one of ordinary skill in the art at the time the invention was made to appreciate the size of multimedia files and especially movies to be over 100 megabytes in size as taught by Hunter. Furthermore, Hunter teaches multimedia files being in compressed and uncompressed modes.

As to claim 3, Hunter teaches the system of claim 1, wherein at least one multimedia content file comprises a motion picture. (Abstract, 0013)

As to claim 4, Hunter teaches the system of claim 1, wherein at least one multimedia content file comprises a music compilation. (0105)

As to claim 5, it would have been obvious to one of ordinary skill in the art at the time the invention was made to appreciate at least one multimedia file comprising a game given the size, video, and audio capabilities of multimedia files that have been taught by Hunter.

As to claim 6, Hunter teaches a system of claim 1, wherein the system is configured to provide access to a user computer of a list from the processor, the list comprising: (0064, 0083)

a plurality of titles of multimedia content files stored in the storage device; (0050, 0083)

and at least a first user-selectable time and a second user-selectable time for downloading a multimedia content file from the storage device to a user computer, the first user-selectable time corresponding to a time when network bandwidth usage is most likely high, the second user-selectable time corresponding to a time when network bandwidth usage is most likely low, wherein the first user-selectable price is greater than the second user-selectable price. (0050, 0047, 0039, 0033, 0086, 0093, 0099, 0102)

With respect to the limitation, "the first user-selectable time being associated with a first user-selectable price" and "the second user-selectable time being associated with a second user-selectable price", although Hunter does teach that content providers can change pricing at any time to optimize price vs. consumer demand and that content providers can offer pricing specials or incentives, Hunter does not explicitly indicate a user-selected time being associated with a user-selected price. (0014, 0015)

Cochran, however, teaches a searching method in which a consumer can simultaneously select multiple indices such as prices and times. (col 2, 26-29; col 4, 15-25)

With respect to claim 6, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to incorporate the teachings of Cochran into those of Hunter to make the system more efficient search of the file database and to make searching/requesting more accurate and user-friendly. (Cochran Abstract)

As to claim 7, Hunter teaches a system of claim 6, wherein the first user-selected time is between about 8:00 AM and about 9:00 PM. (0093, 0099, 0102)

As to claim 8, Hunter teaches a system of claim 6, wherein the second user-selected time is between about 1:00 AM and about 7:00 AM. (0086)

As to claim 9, Hunter teaches a system of claim 1, wherein the processor is further configured to send offers periodically to a plurality of user computers, each offer comprising a title of at least one multimedia content file stored in the storage device and a plurality of user-selectable times for downloading the content file, each user-selected time being associated with a different price. (0033, 0083)

As to claim 10, Hunter teaches a system of claim 1, wherein the processor is further configured to send offers to a plurality of user computers, each offer comprising a title of at least one new multimedia content file stored in the storage device and a plurality of user-selectable times for downloading the content file, each user-selected time being associated with a different price. (0033, 0083)

As to claim 11, Hunter teaches a system of claim 1, wherein at least one user computer comprises a wireless modem configured to communicate wirelessly with a mobile switching office, the mobile switching office being configured to communicate with the processor. (0013, 0017, 0039)

As to claim 12, Hunter teaches a system of claim 1, wherein the communication network comprises at least one wireless communication portion. (0013, 0017, 0039)

As to claim 13, Hunter teaches a system of claim 1, wherein the processor is configured to monitor a level of bandwidth usage of the network and adjust a scheduled download time to a time when bandwidth usage is below a pre-determined level. (0041, 0042, 0086)

As to claim 19, Hunter teaches a method of downloading at least one multimedia content file to a plurality of user computers via a communication network, the method comprising: (abstract, 013, 0019)

a) receiving a purchase request from a user computer via the network, the purchase request comprising a request to download at least one multimedia content file stored in a storage device to the user computer at a user-selected time with a user-selected price;(0014, 0047, 0055, 0083, 0097)

b) and downloading the requested multimedia content file to the user computer at the user-selected time in response to the purchase request from the user computer. (0097)

With respect to the specific limitation "a purchase request comprising a request to download ... at a user-selected time with a user-selected price", Hunter does not explicitly indicate a multimedia file being associated with a user-selected time and a user-selected price for each purchase request.

Cochran does teach a searching method in which a consumer can simultaneously select multiple indices such as prices and times. (col 2, 26-29; col 4, 15-25)

With respect to claim 19, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to incorporate the teachings of Cochran into those of Hunter to make the system more efficient search of the file database and to make searching/requesting more accurate and user-friendly. (Cochran Abstract)

As to claim 20, Hunter teaches a method of claim 19, further comprising charging the purchase price to a financial account associated with the user. (0018, 0064, 0069)

As to claim 21, Hunter teaches a method of claim 19, further comprising determining whether a user is authorized to purchase a content file. (0060-0068)

As to claim 22, Hunter teaches a method of claim 19, further comprising providing a list to the user computer, the list comprising: (0083)

a) a plurality of titles of multimedia content files stored in the storage device;(0083)

b) and at least a first user-selectable time and a second user-selectable time for downloading a multimedia content file from the storage device to a user computer, the first user-selectable time corresponding to a time when network bandwidth usage is most likely high, the second user-selectable time corresponding to a time when network bandwidth usage is most likely low, the first user-selectable time being associated with a first user-selectable price, and the second user-selectable time being associated with

a second user-selectable price, wherein the first user-selectable price is greater than the second user-selectable price. (0050, 0047, 0039, 0033, 0086, 0093, 0099, 0102)

With respect to the limitation, "the first user-selectable time being associated with a first user-selectable price" and "the second user-selectable time being associated with a second user-selectable price", although Hunter does teach that content providers can change pricing at any time to optimize price vs. consumer demand and that content providers can offer pricing specials or incentives, Hunter does not explicitly indicate a user-selected time being associated with a user-selected price. (0014, 0015)

Cochran, however, teaches a searching method in which a consumer can simultaneously select multiple indices such as prices and times. (col 2, 26-29; col 4, 15-25)

With respect to claim 22, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to incorporate the teachings of Cochran into those of Hunter to make the system more efficient search of the file database and to make searching/requesting more accurate and user-friendly.(Cochran Abstract

As to claim 24, Hunter teaches a method of downloading at least one multimedia content file to a plurality of user computers via a communication network, the method comprising: (abstract, 0013, 0019)

a) receiving a purchase request from a user computer via the network, the purchase request comprising a request to download at least one multimedia content file stored in a storing means to the user computer at a user-selected time with a user-selected price;(0014, 0047, 0055, 0083, 0097)

b) and downloading the requested multimedia content file to the user computer at the user-selected time in response to the purchase request from the user computer.

(0097)

With respect to the specific limitation "a purchase request comprising a request to download ... at a user-selected time with a user-selected price", Hunter does not explicitly indicate a multimedia file being associated with a user-selected time and a user-selected price for each purchase request.

Cochran does teach a searching method in which a consumer can simultaneously select multiple indices such as prices and times. (col 2, 26-29; col 4, 15-25)

With respect to claim 24, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to incorporate the teachings of Cochran into those of Hunter to make the system more efficient search of the file database and to make searching/requesting more accurate and user-friendly. (Cochran Abstract)

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Asad M Nawaz whose telephone number is (703) 305-0094. The examiner can normally be reached on M-F 8-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hosain Alam can be reached on (703) 308-6662. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Art Unit: 2155

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
